

Hi, I'm one of the co-founders of **Hyperbyte AI**.

Hyperbyte AI is an international company. We've taught students not just in Malaysia, but also in countries like **Thailand**, including running workshops in **Bangkok** and beyond.

At Hyperbyte, we build programs for **ambitious students in Southeast Asia**, because we know how stressful it can be to feel like you're missing out on opportunities simply because you don't know where to look. That's why we created the kind of program that helps students truly **stand out** from their peers.

Our team at Hyperbyte AI includes graduates from **top universities** who have gone on to secure **competitive roles** globally. We understand what it takes to succeed on the world stage, and we want to help you get there too.

We currently run **three main programs**. First, we have an **AI & Tech Innovation Program** where students can learn real-world AI and tech skills, build a prototype to solve an actual problem, and pitch to senior industry experts. The second program we have is an **AI Mastery Course** where you can dive deeper into topics like **convolutional neural networks** by working on **hands-on projects**, such as building a **self-driving car system** or **object detection models**. Last, we also have a 1-to-1 **Mentorship Program**. This program provides a guided research journey, similar to a university-style process. Students joining this program will end with the opportunity to **publish a research paper**, and many of our students already have.

Students who joined our programs have received offers from top universities like **Cambridge, Imperial, Cornell, Berkeley**, and many more — in the **UK, US, Singapore**, and **Malaysia**.

Students who have joined our program shared that our bootcamp gave a much clearer understanding of AI, which helped them to stand out in their application and some of them found the program fun, **insightful**, and helpful in understanding what studying **engineering** or **data science** at university is really like.

If you're someone who dreams of studying at top universities like **Oxford, Cambridge, Harvard**, or **MIT**, or landing competitive careers in **tech** at companies like **Google, Amazon**, or at **consulting** firms like **McKinsey**, or **investment banking** at places like **J.P. Morgan**, this is the kind of program designed for **you**.
